AB - ZA200100528 NOVELTY - A surgical staple (40) comprises a back or base
portion (40A) and a respective leg (40B) extending at an angle meeting
perpendicular from each end of the base and terminating at a free end,
the base and legs lying in substantially a common plane except for a
centre portion (40C) of the base which is deformed generally in a
U-shape in a direction perpendicular to the common plane of the legs.
The centre portion of the staple allows the staple to straddle a blood
locator tube projecting from the end of a stapler, so that the staple
can be closed at the centre of a puncture wound in which the tube is
located.
